ABOUT US

It is at the service of all domestic and international companies operating in the fields of OTC / Food Supplements / Supplements, Cosmetics and CE certified products with its rich machinery-equipment infrastructure and experience in a 3000 m² closed area.

PharmaMina, which has adopted quality in all processes from raw material supply to finished product formation; It has documented its quality with ISO 9001, GMP, HACCP, ISO 13485 standards. All production processes are carried out, filed and reported in accordance with GMP, HACCP and ISO norms.

Standardized production processes allow the same quality to be achieved in all production processes. It provides complete service in all these processes with its Production, Quality, Foreign Trade, Business Development and Operation, Project Coordinator, Design, R&D, Licensing units.

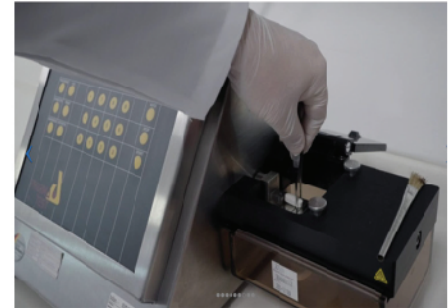

Which has been serving in the field of Food Supplement and Cosmetics production since 2015, has been serving in the Medical Devices and CE products market by adding the production activities of many products as of 2021.

PharmaMina, which has adopted quality in every field; Food Supplement production processes are followed by a fully equipped quality laboratory. In our laboratory; Instrumental analysis, quality control, microbiology and R&D analyzes are carried out and it is the guarantee of quality production with its experienced staff team.

From the acceptance of raw materials, which is considered the beginning of the production of a product, to the end of production, all weighing processes are made traceable with the automatic labeling system and control is provided at every process stage.

Production lines; separated by microbiological control and humidity-temperature differences, eliminating the risk of contamination.

With our goal of being the highest quality, fastest and most reliable production facility in Turkey, in order to increase our production speed and capacity when necessary, in our export production processes, we have 3 of each machine in our structure, allowing the processes to progress quickly and with high quality.

ALL YOU NEED FROM A CRITICAL CONTROL POINT IN ONE

The MEKI™ ONE brings all the benefits of an X-ray inspection system in one compact package. Combining the superior X-ray sensitivity and the smallest footprint, the system also comes equipped with multiple sensors that monitor the system's safety and operational functionality. One example is the rejection confirmation that monitors that each non-conforming product is rejected accordingly and only the safe and high-quality products pass this critical control point.

Watch the video above to learn more about the functionalities of the MEKI™ ONE system.

The system makes it easy to implement better inspection solutions to food packaging lines while also fulfilling and even exceeding any global quality standard that food manufacturers and co-packers may encounter when expanding their business. The system is designed for the inspection of primary packaged food products because it will provide excellent detection performance and pack-for-pack traceability, both of which are key factors in today's food business. Equipping individual packaging lines with the MEKI™ ONE system ensures that you will benefit from all of the aspects of this best value safety and quality inspection solution.

AR-GE AND LABORATORY
